Continuation of 11. does NOT place the application in condition for allowance because:

Applicant's arguments filed 02/14/06 have been fully considered but they are not persuasive.

It is argued, at page 14 of the remark, that "Kozlowski's figure 2 does not disclose a reset transistor having tow threshold voltages" and "Kozlowski fail to teach or disclose a transistor structure configured to have at least two threshold voltages". However, lines 36-55, column 3; lines 40-63, column 6, fig.2 of Kozlowski does show at least one reset transistor 14 has at least two threshold voltages (at 0.5v, 08.v, or 1v) associated with at least one channel of the reset transistor 14 because an equation of the threshold voltage (VTOptinum) of reset Fet 14, VTOptinum = Vx[In ((µ(Wrst/Lrst)CoxVx 2) / (2Jdark Adet))) - Vx

where Vx =nkT/e; n is the ideality of the reset MOSFET Jdark is the dark current density for the photodetector, Adet is the photodetector area, it is the MOSFET mobility, Wrst is the width of the reset MOSFET, Lrst is the length of the reset MOSFET, and Cox is the MOSFET capacitance density.

As the formula above, when Jdark changes, VTOptinum of the reset Fet 14 is changed and shown in fig. 2 of Kozlowski. Thus, applicant's claims 1,25,39 do not distinguish over Kozlowski et al. reference..
